

Abstract of the Disclosure:

In a compressor having a cylinder head defining a refrigerant suction
5 chamber and a refrigerant discharge chamber, the cylinder head is provided
with a space located between the refrigerant suction chamber and the
refrigerant discharge chamber. The cylinder head is disposed at one end of a
compressor housing so that each of the refrigerant suction chamber and the
refrigerant discharge chamber communicates with a plurality of cylinder bores
10 disposed within the compressor housing and spaced from one another in a
circumferential direction. In each cylinder bore, a piston reciprocally movable
is disposed.
